### *How Our Record Is Calculated*

Our overall record for the 2016 football season was 514 - 306 for a very profitable 62.6% combined College and Pro ATS record. Our record is based on Unit Play. We rate our games as Regular Plays, which count as one loss or one win and are based on the normal amount a player would wager on a game. If you normally play \$100 on a game, then a Regular Play for you would be \$100. We also put out Triple Plays, which we think are worth up to three times what you normally play on a game and count as three wins or three losses, Five Star Plays, which we think is worth up to five times what you normally play on a game and count as five wins or five losses and our Ten Star Plays which count as 10 wins or 10 losses. The single most important thing is sports wagering is to play what you feel comfortable playing, regardless of how anyone rates a game. NEVER let anyone talk you into playing more on a game than you feel comfortable playing. We have excellent reasons for rating plays higher than Regular Plays, but we lose Five Star and Ten Star Plays during the season. We have many \$100 players who might play \$200 on a Triple Play and \$300 on a Five Star Play because that's their comfort zone. That's smart play on their part, but for our record, a Regular Play is one win or loss, a Triple Play is three wins or losses and a Five Star Play is five wins or losses. If you have any questions about our record or how it's calculated, don't hesitate to give me a call. All our phone numbers are on the home page.
